SUMMARY

Python backend engineer with hands-on experience building RESTful APIs, agentic AI workflows, and cloud-native services using FastAPI, Django, LangChain, OpenAI's API, and Google's Agent Development Kit (ADK). Comfortable across the full delivery cycle — API design, containerized deployment on AWS, Docker, Kubernetes, and Helm, and CI/CD automation. Additional full-stack background in Java, React.js, and Node.js from enterprise application work at Infosys.

EXPERIENCE

Infosys Ltd. — Specialist Programmer

Aug 2025 – Present

- Built agentic AI workflows in Python using FastAPI, Django, OpenAI's API, LangChain, and Google's Agent Development Kit (ADK) to automate enterprise software tasks and improve developer productivity.
- Designed secure RESTful APIs with JWT authentication, RBAC, schema design, indexing, connection pooling, and query optimization, applying SOLID design principles and reusable backend services.
- Built enterprise web applications with React.js, Node.js, Express.js, and MongoDB, using modular architecture and reusable components.
- Collaborated across the full SDLC in cross-functional Agile teams — design, development, testing, deployment, code review, and production support.

PROJECTS

AI Code Review Agent

Python, FastAPI, OpenAI API, GitHub API, Docker

- Built an AI agent for automated GitHub pull request analysis, using FastAPI and OpenAI's LLMs to flag code-quality, security, and best-practice issues.
- Evaluated on 100+ sample pull requests across open-source-style repositories, cutting estimated manual review time by roughly 30–35
- Implemented asynchronous request handling (Python AsyncIO) for concurrent LLM calls, along with automated bug summarization and documentation generation.
- Deployed with Docker using modular architecture, secure APIs, and centralized logging.

Cloud-Native CI/CD Deployment Platform

Docker, Kubernetes, GitHub Actions, AWS, Terraform

- Built a cloud-native CI/CD platform with GitHub Actions, Docker, Kubernetes, Helm, AWS, and Terraform, automating build, test, deployment, and infrastructure-as-code workflows.
- Designed to support deployment of 12+ microservices across four environments (Dev, QA, UAT, Production).
- Implemented rolling deployments, health checks, and rollback mechanisms — reducing rollback time from roughly 15 minutes to under 5 in testing.

SKILLS

Languages: Python, Java, C++, JavaScript, TypeScript, SQL

Backend & APIs: FastAPI, Django, Node.js, Express.js, Spring Boot, REST APIs, Microservices

Frontend: React.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Material UI, Figma, Responsive Design

Cloud & DevOps: AWS, Docker, Kubernetes, Helm, Terraform, GitHub Actions, CI/CD, Infrastructure as Code

Databases: PostgreSQL, MongoDB, MySQL, Redis, Schema Design, Indexing, Connection Pooling

AI & Agentic Systems: Agentic AI, LangChain, OpenAI API, Google ADK, LLM Integration, AI Agents

EDUCATION

B.Tech in Artificial Intelligence and Machine Learning

2021 – 2025

University School of Automation and Robotics (USAR), GGSIPU

CGPA: 8.6

ACHIEVEMENTS

- Claude Architect Certified (Score: **856/1000**).
- Selected for Amazon ML Summer School 2024.
- Solved 400+ DSA problems across LeetCode and Codeforces.
